Preview un-usably laggy even with GPU acceleration & a proxy.

Also keeps crashing for no apparent reason.

- Using Ryzen 5 1600, GTX 1060 6GB & 16 GB DDR4 RAM.

Can't recommend until these are fixed as they are quite severe issues.. I used to use it all the time, then out of nowhere it decided that i dont have the license for it. I'm not sure why but its unusable, I've tried reinstalling, varifying the files but nothing's worked so far..

(EDIT: I found something by the people that made it explaining how to fix that problem, and once I did all that I just got a different error message. Which I've tried fixing but nothing works)

(Edit 2: I got rid of the error message but now all it does is tell me its running for about 5 seconds then it closes itself, without the actual editing stuff opening)
